

Environmental and Sustainability Policy

Policy Statement

At European Electronique (EE) we recognise the importance of environmental responsibilities and our aim is to grow our business in a sustainable way, minimising the impact our company has on the environment and the planet.

We are ISO14001: 2015 certified and are committed to exceeding the requirements by monitoring and improving our environmental performance.

Our objectives are to:

- Understand all applicable environmental legislation and meeting or exceeding their requirements.
- Prevention of pollution, sustainable resource use and climate change mitigation and adaption.
- Partnering with environmental companies to reduce our carbon footprint and that of our customers.
- Working only with vendors and other partners who share our values and who are also committed to meeting their environmental responsibilities.
- Communicate, engage, and work with our stakeholders, including customers and that of our supply chain, to achieve a common goal of reducing environmental impact while also positively influencing behaviours.
- Ensure that all our employees are aware of our environmental policies and ethos and facilitate employees' compliance with these and our objectives.
- Practise energy efficiency and aim for a paperless office environment.
- Recycle and reuse packaging where appropriate and dispose of waste and equipment in accordance with the WEEE directive.

The Environmental System is subject to both internal and external audits and is regularly reviewed by the Board of Directors to ensure continuous improvement and that it remains appropriate and suitable to our business.

For and on behalf of the Board of Directors

Yolanta Gill
CEO
